### Class10<sup>th</sup> Maths- chapter 7

This is problem 3 of exercise 7.3

1. Find the area of a triangle formed by joining the mid points of the sides of the triangle whose vertices are (0,-1) , (2,1) and (0,3). Find the ratio of this area to the area of the given triangle.

**Solution:**

Let the points be A(0,-1) , B(2,1) , C (0,3)

Hence the points are :

D = (1,0)

E = (1,2)

F = (0,1)

Area of triangle =

$$\left[\frac{1}{2}\right]|x_1(y_2 - y_3) + x_2(y_3 - y_1) + x_3(y_1 - y_2)| \quad (1)$$

From this formula, area of triangle ABC=

$$\left[\frac{1}{2}\right]|0(1 - 3) + 2(3 + 1) + 0(-1 - 1)| \quad (2)$$

$$(3)$$

$$= 4sq.units \quad (4)$$

Likewise, the area of the triangle DEF=

$$\left[\frac{1}{2}\right]|1(2 - 1) + 1(1 - 0) + 0(0 - 2)| \quad (5)$$

$$(6)$$

$$= 1sq.unit \quad (7)$$

Therefore, the ratio between the triangle DEF and ABC = 1:4
